Automation Controller
Residential/Commercial

Features:

* **Includes internal memory and clock for PC free operation**

* **Easy and trouble-free USB connection**

* **Stores over 1,000 commands in 32KB of memory**

* **Feed-through outlet won't block you from plugging in other devices**

* **Compatible with Smarthome manager and third-party programs**

* **Schedules can be set up directly on your PC**

The controller is a stand-alone home automation interface for controlling lights, appliances, heating/air conditioning systems and alarm systems. It includes on-board processing so timers and macros can be downloaded without the need to leave the computer running.

Wireless Automation Controller System

This full-featured, customizable wireless security system connects in a fraction of the time of hardwired systems. There is no complicated cabling or wiring. After plugging in the main unit, the wireless sensors are mounted in the zones that you want to protect. You then program the system.

When an alarm signal is detected from one of the sensors, the system sounds an 85 decibel siren. It can also be programmed to call any phone number you choose and play a recorded message.
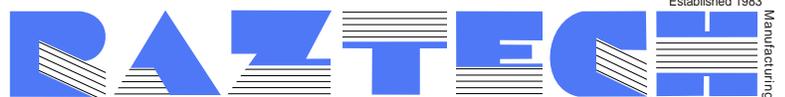

The system consists of a control panel, keypad, graphic LCD screen with clock, siren, speaker, and microphone all in the console shown here. The system will hold eight different user codes and can be used as a message center to record or listen to messages.

For added convenience, this system can operate up to seven groups of X-10 controlled lights or appliances.

Features:

* **Easy set-up, a voice prompts you step-by-step**

* **No complicated wiring to install**

* **A loud siren and flashing lights alert occupants and deters intruders**

* **System calls you when an alarm signal is detected**

* **Optional monitoring personnel can dispatch police or the fire department should a fire be detected even if no one is home**

Price varies by options, call for details.
