

# IMAGER™

*Pattern and color changing projector spotlight*

*The IMAKER may be used to project a sequence of images or a rainbow of colors. The IMAKER has automatic light and wheel movement which can be reprogrammed. With computer controlled wheel speed and position, the imager has the capability to produce unusual lighting effects.*

Imager with a single pattern wheel.

An additional wheel is available

The IMAKER projector is able to project multiple images at different intervals or a continuous image/scene. Images may be ordered in black & white or full color. The IMAKER wheel can be equipped with a continuous circular pattern for slow scene changing effects like falling rain, moving scenes or story boards, and moving messages for advertising. The IMAKER can be programmed via PC to run a routine without a PC or controller. By simply plugging the imager into a wall outlet, the wheel moves to different programmed positions at programmed time intervals.

The RazRock™  
Decorative rock cover

Cover and protect the IMAKER with the RazRock or the RazDome for outdoor

The RazDome™  
Protective cover
