

SmartLite™

*Programmable
Outdoor Imager*

The SmartLite is able to project multiple images at different intervals or a continuous scene. This intelligent projector has an image wheel that moves to programmable positions with programmed time intervals. The SmartLite has the capability to produce unusual lighting effects. A dimmer will fade images in and out of view. An oscillating effect would give the projected image a shimmering effect. The projector can be used indoors or outdoors.

SmartLite™ Specifications & Instructions

Intelligent moving Wheel Projector

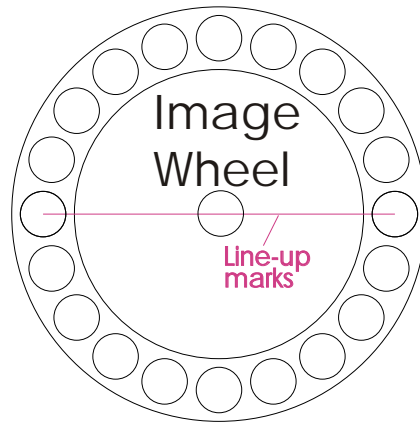

Operation

Plug cord into a 110vac outlet. Remove top hatch and focus with front lens. The smart wheel will calibrate and move from one position to another while dimming up and down.

Setting Focus

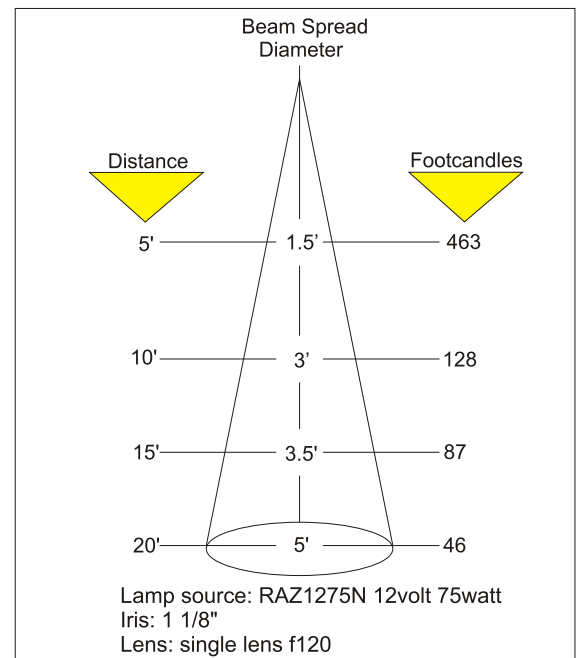

Loosen both front stop collars and move Front lens assembly along shafts.

Changing film

Unplug Fixture then, remove top hatch and unscrew wheel screws. Remove plastic disks and insert new film with on plastic disk. Make sure the scribed mark on plastic disk lines up with the film center line. Tack film and plastic disk with tape and mount on motor shaft.

Photometrics

Another lens can be added to the MicroSpot to double the image size at the same distance.

Changing Image Size

To decrease the image size: Unclip and remove back lens assembly and focus with front lens assembly.

Changing Lamp

Unplug socket from lamp. Loosen socket head screws with washers. Lamp will unhook out of assembly. Insert new lamp same way but, do not touch inner part of lamp.
